Work Experience

Senior Software Engineer

2021 April - Present

Tableau Software at Salesforce

- **Distributed Systems & Cloud Architecture:** Architected and optimized event-driven microservices and high-throughput data pipelines on AWS. Led critical production operations, including deploying global secondary index (GSI) changes and managing asynchronous queues (SQS), ensuring highly available and fault-tolerant system integrations.
- **API Performance & Scale Optimization:** Diagnosed and resolved complex integration bottlenecks in production. Dramatically reduced API latency by implementing JWT token caching, optimizing backend database access times (e.g., reducing RESTORE audit queries to ~520ms), and streamlining DynamoDB duplicate check validations.
- **DevOps, CI/CD & Secure Deployments:** Led complex system integrations by migrating web services to managed CI/CD deployment pipelines and standardized service meshes. Containerized applications utilizing Docker/AWS ECS and enforced robust security postures using AWS Secrets Manager, Vault, and automated certificate rotations.
- **Production Reliability & Observability:** Elevated core services to Tier-1 reliability (maintaining 99.95% availability) by implementing synthetic testing for public endpoints and real-time observability dashboards (Grafana, CloudWatch, Argus). Actively led war rooms, most recently mitigating a major queue drain incident and catching a critical silent data loss bug in batched messaging deployments.
- **Technical Leadership & Engineering Excellence:** Drove cross-team technical alignment by leading Sev-3 Root Cause Analyses (RCAs), authoring comprehensive design documents, reference architectures, and operational playbooks. Mentored engineering teams, conducted rigorous technical design/code reviews, and spearheaded initiatives to burn down technical debt.

Software Engineer

2019 August - 2021 April

Microsoft via Insight Global

- Designed and developed enterprise-level test infrastructure, integrating it into code to support the Microsoft Office team.
- Utilized Ruby and the Chef platform to design systems for automating provisioning of macOS machines, benefiting multiple Microsoft Office for Mac teams.
- Demonstrated proficiency in Agile processes, swiftly incorporating and acting upon customer feedback to ensure supportability across various macOS versions.
- Committed to spec-driven design principles, minimizing testing gaps to validate new functionalities and proactively prevent future bugs.
- Actively contributed to the open-source Chef cookbook, "macos-cookbook," hosted on Microsoft's GitHub repository.

Senior Technical Support Engineer

2015 January - 2019 August

Tableau Software

- Independently diagnosed and resolved complex application issues, including user experience latency, in customer environments at scale.
- Demonstrated expertise in improving team case closing metrics by proactively identifying and documenting previously undocumented issues through internal knowledge base (KB) articles.
- Assisted fellow engineers by sharing insights and solutions through the creation of comprehensive troubleshooting guides.
- Performed root cause analysis, leveraging Tableau log files and utilizing various troubleshooting tools, to provide effective guidance to customers.
- Maintained a high level of customer satisfaction through excellent communication, problem-solving skills, and attention to detail.

Education

Master of Science, Computer Science

Seattle University

September 2018 - June 2020 (GPA 3.7)

Graduate Certificate in Computer Science Fundamentals

September 2017 - Jun 2018

Bachelor of Science, Applied and Computational Math Sciences

Concentration in Discrete Mathematics and Algorithms. Minor in Mathematics and Applied Mathematics

University of Washington (Seattle)

September 2009 - June 2013

Languages: Fluent in Chinese (Cantonese and Mandarin) and English
